

1:72 SPITFIRE INSTRUMENT PANELS

Instructions

Print this document on a colour inkjet or laser printer set to the highest quality print settings and using good quality paper.

Carefully cut out the panel faces and trim to fit the kit panel.

Attach with a suitable glue, checking first that it won't make the colours run by testing it on another part of this sheet.

Add additional cockpit detailing as required. An accurate and finely moulded Spitfire control column and seat are available in our conversion set 72-C001-B.

Manufacturers of injected plastic conversions sets and detailing parts for model aircraft.
